

## CONTROL UNIT JUMPER

MODELS: 250SX, 250SXO,  
635ES, 635ESO,  
2400E, 2400EO

### WARNING

LP & NG ARE EXTREMELY FLAMMABLE SO  
TAKE EXTRA PRECAUTIONS WHEN  
PERFORMING ANY WORK TO THE HEATER

The control unit is shipped set up for Liquid Propane (LP) applications. Please note that for Natural Gas (NG) applications the jumper on JP6 needs to be installed. Follow directions for removing the control unit on Bulletin TWH-G2-24. See picture below for location of jumper. Gently slide the jumper straight on to install. Each Bosch water heater is gas specific, it is important to know that there is more involved in converting the heater to a different gas type than just this jumper.
